ABOUT ME

As a 3rd-year Computer Science student at PMCOE, Pune, I have a foundational understanding of Node.js,Angular and I'm currently exploring the MEAN stack. I am also a beginner in React, actively seeking to improve proficiency. My experience includes contributing to impactful projects at Navodita Infotech and refining skills through a virtual internship at Bharat Intern. Committed to continuous learning and growth in development, I am dedicated to crafting resilient web applications.

EXPERIENCE

1 - 31 JAN 2024   **Navodita Infotech**

AngularJs Intern

- At Navodita Infotech, I delved into AngularJS development, collaborating with seasoned developers on intricate projects. I navigated challenges, honing my skills in directives and components to enhance user interactivity. This experience problem-solving, significantly advancing my proficiency in frontend development.

- Project Completed : Weather Forecasting App

Web Developer

- During my time at Bharat Intern, I was immersed in the world of frontend development, honing my skills and gaining valuable experience. Through collaborative projects and mentorship, I expanded my understanding of web development principles and best practices. This internship provided me with a solid foundation for creating engaging user experiences and fueled my passion for frontend development.

- Projects Completed : Netflix Homepage clone, PortFolio Website

TECH STACK

JavaScript   Node Js   Angular Js   Express Js   React Js   MongoDB   SQL

PROJECTS

■ Url Shortner & Analytics Tracker

Developed a Node.js application for URL shortening and analytics tracking. The project offers a streamlined service for converting lengthy URLs into shorter, more manageable ones while also providing comprehensive analytics on user interaction. Utilized EJS for server-side rendering and JWT tokens for authentication.
Skills Utilized: Node.js, Express.js, EJS, JWT authentication
https://github.com/yashthakare93/URL-SHORTNER

■ Weather Forecasting App

Developed a weather forecast application using AngularJS, allowing users to search for weather information based on location. The app displays real-time weather data, including temperature, description, humidity, and wind speed. Dynamic weather icons change based on current weather conditions.
Skills Utilized: AngularJS, HTML, CSS, JavaScript
